

Installation guide for Picket fence

Set post 24" in ground in cement FENCE height is to top of post. (not top of rail)

Once cement has set, slide one end of bottom rail in post then slide other end in opposite post until the notches are completely in post.

(you can use the bottom rails to aid in spacing post by installing them as you go. Be sure to leave a slight amount of slack for expansion and contraction.)

FOR CLOSED PICKET STYLES snap pickets in next. Then work top rail into post then work over boards snap other end of rail into post. Making sure notches are inside posts.

FOR STANDARD PICKET STYLES work top rail in same as bottom rail. Slide pickets through top rail into bottom rail making sure they snap in. Install caps if not on picket.
